## **Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)**

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 45 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 45 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

#### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended by replacing the set of claims filed March 15, 2010 with the following set of claims:

--

- 1. A polymethylaluminoxane composition generated by thermal decomposition of an alkylaluminum compound having an aluminum-oxygen-carbon bond, the alkylaluminum compound being generated by a reaction between trimethylaluminum and benzoic acid, with toluene as a solvent, wherein:
- (i) a mole fraction of methyl groups originating from trimethylaluminum, relative to the total moles of methyl groups existing in the generated polymethylaluminoxane composition, is not more than 26 mol%;
- (ii) the generated polymethylaluminoxane composition has a viscosity of not more than  $2.1 \times 10^{-3}$  Pa•sec at  $40^{\circ}$ C.
- (iii) an aluminum concentration of the generated polymethylaluminoxane composition is in a range of from 9.1 wt% to 9.4 wt%, and
- (iv) the generated polymethylaluminoxane composition does not generate gels when stored at 25 ℃ for 90 days.

### 2-3. (Cancelled)

4. A method of producing the polymethylaluminoxane composition according to claim 1, the method comprising the steps of:

causing trimethylaluminum to react with benzoic acid, with toluene as a solvent;

Application/Control Number: 10/593,579 Page 3

Art Unit: 1765

and

thermally decomposing the alkylaluminum compound,

wherein a ratio between a mole number of trimethylaluminum and a mole number of oxygen in the benzoic acid is in the range of 1.25 to 1.40 : 1.

5. The method of producing a polymethylaluminoxane composition according to claim 4, wherein

the thermal decomposition is conducted in the absence of a Lewis acid compound in production of the polymethylaluminoxane composition.

# 6-7. (Cancelled)

8. A polymerization catalyst for olefins, comprising as catalytic components: a transition metal compound represented by the general formula (II), MR<sup>5</sup>R<sup>6</sup>R<sup>7</sup>R<sup>8</sup> (II)

wherein M represents a transition metal element, and R<sup>5</sup>, R<sup>6</sup>, R<sup>7</sup>, and R<sup>8</sup> represent organic groups that form together a cycloalkadienyl backbone, and each is selected from an alkyl group, an alkoxy group, an aryloxy group, an alkylsilyl group, an alkylamide group, an alkylamino group, an alkylimino group, or a halogen atom; and

the polymethylaluminoxane composition according to claim 1.

9. A method of polymerizing olefins in the presence of the polymerization catalyst according to claim 8.

10-15. (Cancelled)

--

### **REASONS FOR ALLOWANCE**

2. The following is an examiner's statement of reasons for allowance:

In the Amendments to the Claims filed March 15, 2010, the claimed polymethylaluminoxane composition is further limited to not generating gels when stored at 25°C for 90 days. Since the closest prior art, Smith et al. (US 5,831,109), does not teach or reasonably suggests such limitation, Smith's polymethylaluminoxane composition in the working examples does not contain any unreacted trimethylaluminum as compared to the working examples of the instant application, one would not have expect Smith's polymer to inherently meet the 90 day gel free stability limitation either. Therefore, the instant claim are deemed to novel and nonobvious over the cited prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Caixia Lu whose telephone number is (571) 272-1106. The examiner can normally be reached on 9:00 a.m. to 5:30 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on (571) 272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
